ISKD Nail

S. Robert Rozbruch, MD
Director, Institute for
Limb Lengthening & Reconstruction

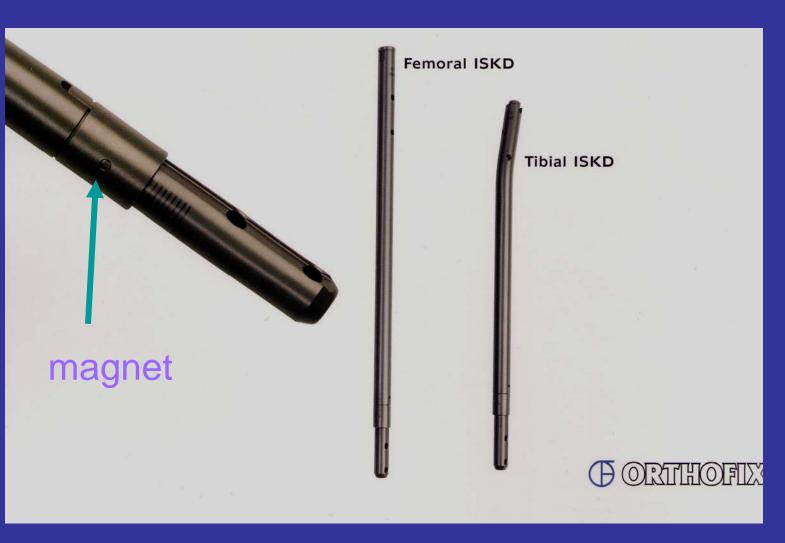

www.LimbLengthening.com

ISKD

Fully implantable limb lengthening nail Intramedullary skeletal kinetic distractor

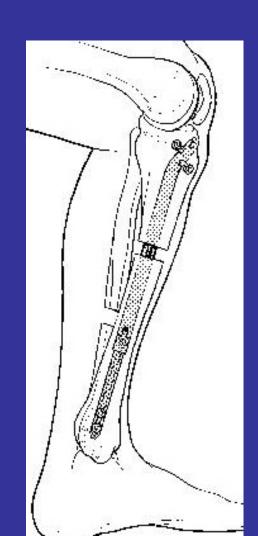

Straight nail

ISKD

Manufactured by Orthofix
Achieves gradual internal lengthening Can lengthen femuror tibia

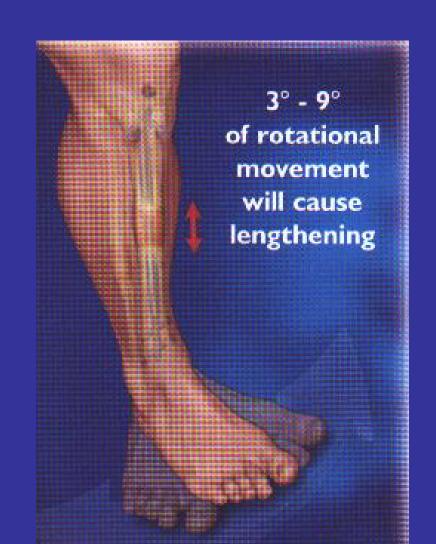

Rotation

Small rotational movements by the patient cause the telescopic nail to lengthen

Avoids any need for an external appartus

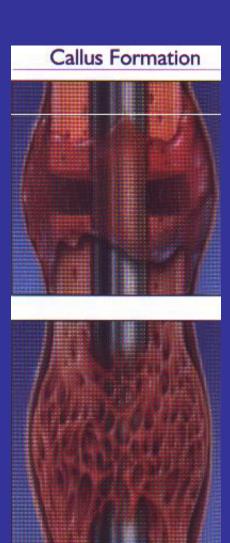

- Less chance of infection
- More comfortable

Ilizarov Method

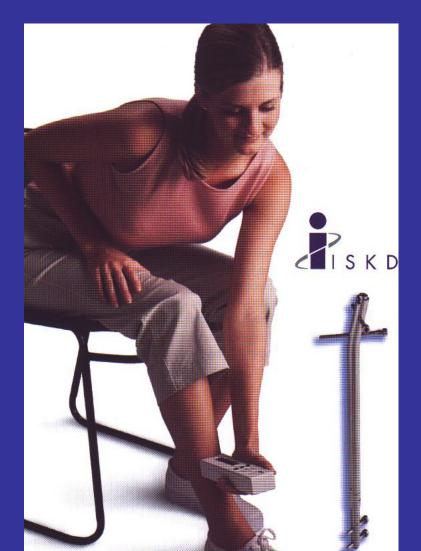

Lengthening is according to the concept of the Ilizarov method

Gradual lengthening of callus or new bone

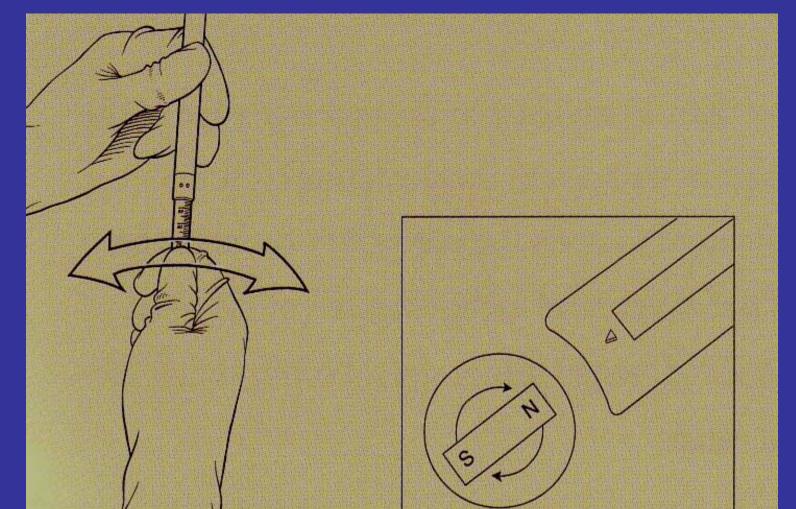

Patient control

Patient can monitor lengthening Monitor is held up against skin

Monitor allows patient to follow progress of distraction

ISKD: internal lengthening nail 4 cm shortening plus deformity

months, fully healed, no deformity or leg length discrepancy

New bone formation around intramedullary rod

6 months

LEFT

12 months

Thank You
